SUMMARY

Data analyst and IT professional with a Computer Science degree and experience working with large operational datasets, system reporting, and data validation across technical and business environments. Skilled in Excel-based reporting, data cleaning, KPI tracking, and cross-functional collaboration to support operational decision-making. Experienced analyzing structured and unstructured data from systems, identifying trends and inconsistencies, and producing accurate documentation and reports. Strong ability to translate complex datasets into actionable insights for technical and non-technical stakeholders.

TECHNICAL PROJECTS

Wazuh SIEM Security Monitoring Project

- Designed and configured a centralized monitoring environment to collect, process, and analyze system-generated data across multiple endpoints.
- Analyzed logs, alerts, and operational datasets to identify anomalies, investigate issues, and improve system visibility.
- Developed dashboards and monitoring views that improved accessibility of operational data and supported informed decision-making.
- Applied data correlation techniques to identify patterns across multiple data sources and improve issue detection capabilities.
- Utilized Linux-based tools and scripting concepts to support automation, monitoring, and system administration functions.

EXPERIENCE

Production Analyst II | Telus Digital | Hoboken, NJ | Mar. 2026 - Present

- Analyzed system workflows and operational processes to identify inefficiencies, improve performance, and support business objectives.
- Executed testing, validation, and quality assurance activities using internal software tools and scripting workflows to ensure operational accuracy and system reliability.
- Investigated technical and operational issues through structured troubleshooting and root cause analysis, reducing workflow disruptions and improving system performance.
- Collaborated with development and operations teams to evaluate system functionality, identify process gaps, and recommend technology-driven workflow improvements.
- Maintained software configurations, testing environments, and operational systems to support ongoing business initiatives and platform stability.
- Documented system behavior, testing outcomes, process requirements, and operational findings to improve knowledge sharing and support decision-making.

IT Support Analyst | TopTierWireless LLC | Northvale, NJ | Jan. 2025 - Mar. 2026

- Analyzed technical and operational issues impacting users and business workflows, identifying root causes and implementing effective resolutions.
- Supported Office 365 administration, account management, and access-related processes while maintaining accurate user and system records.
- Validated system functionality and operational workflows to ensure consistency, accuracy, and business continuity.
- Maintained detailed documentation of support activities, technical procedures, workflow processes, and system configurations.
- Collaborated with internal stakeholders to streamline support operations, improve efficiency, and enhance service delivery.
- Assisted with onboarding, device deployment, and system setup activities to ensure operational readiness and user productivity.

Field Technician | National Water Service | Union, NJ | Jul. 2024 - Oct. 2025

- Coordinated field operations across multiple service locations while maintaining accurate operational records and reporting information.
- Managed documentation, equipment tracking, and service data to support workflow efficiency and reporting accuracy.
- Collaborated with field personnel and office teams to ensure timely communication, issue resolution, and operational continuity.
- Validated service information and maintained accurate records supporting operational planning and decision-making.

Data Science Intern | Pollentia Inc. | Dallas, TX | Mar. 2024 - Jun. 2024

- Processed, validated, and analyzed datasets using Python to support internal analytics initiatives
- Performed data quality checks to ensure accuracy and reliability of reporting outputs
- Documented analytical workflows and communicated insights to technical and non-technical stakeholders

Retail Associate | L.L.Bean | Yonkers, NY | Aug. 2021 - Jan. 2023

- Delivered exceptional customer service in a fast-paced retail environment, building strong customer relationships
- Assisted customers with product questions and basic technical issues, ensuring satisfaction and positive experiences
- Collaborated with team members to maintain smooth operations and support store performance

Software QA Tester | Gamercraft | Boston, MA | Jul. 2020 - Jul. 2021

- Executed structured QA test plans and documented functional gaps, usability issues, and system limitations using ticketing systems
- Served as a bridge between end-user experience and technical teams by clearly documenting issues and expected outcomes
- Verified fixes and validated solutions, ensuring system changes met user requirements and quality standards
- Maintained detailed, audit-ready documentation of test results, contributing to improved product stability and user satisfaction

EDUCATION & CERTIFICATIONS

Bachelor's Degree: Honors Computer Science (Magna Cum Laude: 3.68) | Manhattan College | Bronx, NY

Certifications: CompTIA Security+ (July 2025)

CORE SKILLS

Systems Analysis • Business Process Analysis • Operational Data Analysis • Data Validation • Root Cause Analysis • Workflow Optimization • System Testing & Validation • Business Systems Support • Technical Documentation • Process Improvement • Operational Reporting • Requirements Analysis • Cross-Functional Collaboration • Office 365 • Windows Administration • Linux Administration • Bash Scripting • Troubleshooting • System Monitoring • Data Integrity • Analytical Problem Solving
